Weidtke, C., see Greger, R., et al. 29

West, M. J., see Chalmers, J. P. 119

Wiehrer, W., see Klug, G., et al. 280

Wilson, M., Attwell, D.
A new method for obtaining isolated photoreceptors from the amphibian retina 238

Woittiez, R. D., Huijing, P. A., Rozendal, R. H.
Influence of muscle architecture on the length-force diagram of mammalian muscle 275

Ziccone, S., Gibbs, C.
Effects of cross reinnervation on the energetics of rat skeletal muscle 297

Indexed in Current Contents

Subject index

A

Abdominal surgery 249
A1 catecholamine neurones 119
Acetylcholine 54, 246
– receptor density 123
Acinar cell 54
Action potential duration 87
Adenosine 42
– cyclic monophosphate 315
– derivatives 42
Adrenalectomized rabbits 147
– rat 213
– rats 139
Adrenalectomy 255
Adrenals 79
Adrenal tyronine hydroxylase 79
β-adrenergic blockade 102
Adrenergic nerves 290
Afterhyperpolarization 194
Aldosterone 93, 139, 147, 213
– plasma concentration 249
9-Alpha fluorocortisol 93
Ambient temperature 79, 243
Amiloride 166
– sensitive Na^+ pathway 166
4-aminopyridine 87
Amphibian diluting segment 166
Anesthesia 249
Animal size 180
Arboreal marsupials 68
Arterial pressure control 134
ATP 42
Atrial cardioballs 186
– muscle 35
Autoregulating kidney 102
Autoregulation 129

B

Ba block 186
Bacterial endotoxin (LPS) 11
Barbiturates 249
Baroreflex system 134
Blood flow 129, 223
– pressure 102, 119
Body temperature 243
Bombesin nonapeptide 54
Bone blood flow 129
Botulinum toxin 228
Brain potentials 342
Brainstem lesions 119
Brattleboro rats 111
Brush border membrane 18

C

Ca^{2+} 280
– -ATPase activity 280
Cable theory 321
Ca depletion 321
Caerulein 54
Calcitonin 111
Calcium 87, 123, 315
– -binding proteins 315
– concentration 1
– entry into terminals 1
–, intracellular 152
– ions 194
Calmodulin 152, 315
Capsaicin 243
Carbachol 246
Cardiac muscle 35
– ventricular muscle 87
Cardiovascular control 119
Carotid occlusion 102
Cell-to-cell channels 152
Cellular concentrations 241
– Cl activity 29
– voltage-divider ratio 336
Cerebral potentials 342
2-chloradensine 42
Chloride activity in cells 29
– channels 157
– current 157
– transport 173
Chronic nerve stimulation 280
– renal failure 208
Citrate 18
Cl^- absorption 259
– fluxes, transcellular 259
– sensitive microelectrode 259
C nociceptors 155
CO_2 laser radiant heat pulses 155
Cold response 243
– tremor 180
Collagen metabolism 271
Collateral blood flow 285
– perfusion pressure 285
Colon 68
Conduction 161
Contraction kinetics 203
Control theory 134
Coronary blood flow 285
– resistance 285
Cortical thick ascending limb of Henle's loop 29
Corticosterone 255
– plasma concentration 249
Costo-uterine muscle 290
Crayfish muscle 1
Cross reinnervation 279
Current transients 54
– – outward 87
Cyclic-AMP 315

Cross reinnervation 279
Current transients 54
– – outward 87
Cyclic-AMP 315

D

Denervated mouse muscles 123
Deoxycorticosterone 93
Depolarization 123
– -release coupling 1
Dexamethasone 93, 147, 213
Diabetes insipidus 266
Dicarboxylic acids 18
Diffusion 35
Distal tubule 111
– tubules of rat kidney 111
DOCA 213

E

Efficiency of force generation 203
Electrical uncoupling 152
Electrolyte transport 111
Electromyograms 180
Electron microprobe analysis 241
– probe 111
Endurance training 216, 271
Energy metabolism 216
Enzyme activities 216, 280
Enzymes of collagen biosynthesis 271
Erythrocyte membrane 74
Evoked current 54
Excretion of electrolytes 93
– of lithium 213
Exercise 63
External Ca depletion 321
Extracellular muscle K^+ 235

F

Facilitation 1, 116
Fast glycolytic (FG) fibres 216
– oxidative glycolytic (FOG) fibres 216
Fatty acid 68
Fever 11
Force-velocity relation 279
Freeze fracture EM 321
Frog heart muscle 321
– skins 336
Fructose 63
Furosemide 29, 166
– -sensitive cotransport system 166

G

Galactosylhydroxylysyl glucosyl-transferase 271
Gallbladder contractility 42
Gap junction permeability 152
– junctional conductance 321
Glomerular filtration rate 93, 208
Glucocorticoid effects 93, 147
Gluconate 259
Glucoreceptors 63
Glucose 63

H

Haemodynamics 129, 223
Heart, coronary blood flow 285
– muscle 321
– rate 119
Hemorrhage, mild 134
Henle's loop 173
Hepatic artery 223
– glucoreceptors 63
– haemodynamic response 223
Hindgut 68
Histamine 46, 243
Holtfreter's solution 157
Human calcitonin 111
– cerebral potentials 342
– muscle 235
Hydrochlorothiazide 266
6-(1-hydroxy-5-nitrobenzylthio)-guanosine (HNBTG) 42
3-hydroxyacyl-CoA dehydrogenase 280
Hyperemia 285
Hypertensive rats 74
Hyperpolarization-activated chloride current 157

I

Indomethacin 42
Insulin 63
Instruments and techniques 238
Intracellular calcium concentration 1
– calcium release 194
– chloride activity 259
coupling 321
– electrodes 83
Intraosseous pressure 129
Inward rectifying K channel 186
Isolated atrial cells 186
– gall bladder 42
– photoreceptors 238
Isometric heat production 279
Isotonic enthalpy 279
Ionic channel 186
Ionophoresis 35
Ion-selective microelectrodes 235

J

Junctional conductance 336

K

K^+ adaptation 166
– channel 186
– concentration 235
– conductance 194
Kidney 18, 29, 111
– blood flow 102
– Henle's loop 173
– microdissection 147
– proximal tubular cells 259
– – tubules 266
K equilibrium potential 186
Ketoacid-CoA transferase 280

L

Lactate dehydrogenase isozymes 280
Large intestine 249
Latency 161
Learning 342
Length-force diagram 275
Linear cable theory 321
Lithium 18, 213
– clearance 208, 266
– -induced uremia 208
Liver blood flow 223
Loop of Henle 111
– – – (MAL) 147

M

Mammalian muscle 275
Marsupials 68
Medulla oblongata 119
Membrane 123
– conductance 336
– potential 186
– vesicles 173
Metabolic fibre transformation 216
Metabolism, resting 297
Microelectrode 83
Microelectrodes 166, 259
Micropipette 83
Micropuncture 111, 266
Microspheres 129
Mineralo- and glucocorticoid effects 93, 147
Mineralocorticoid 139
– hormones 213
Mitochondrial enzyme activities 280
Mn^{2+} 194
Motor endplates 228
– nerve terminal 228
– skills 342
Multiple open states 302
Muscarinic antagonists 35
– response 35
Muscle 216, 271
– architecture 275
–, atrial 35
– blood flow 129
– cells 46
– contraction 235, 309, 315
– denervated 123
– receptors 309

N

Na channels 302
–/H exchange 166
–/Cl/K cotransport 173
Na^+-2 Cl-K^+ cotransport 29
Na-K-ATPase 139, 147
– activity 255
Nasopharyngeal reflex 119
Nephron microdissection 139
Nerve action potential 161
– cross 279
– stimulation 228, 280, 309
– terminal 1
5'-N-ethylcarboxymidoadenosine 42
Neuroblastoma cell membrane 302
Neuromuscular junction 161, 246
– transmission 46
Neurotransmitter release 1
Nephron 147
Noradrenaline 63
– nerves 119
– sensitivity 46
Nonshivering thermogenisis 79
1-N^6-phenylisopropyladenosine 42

O

Oocytes 157
Open-loop gain 134
Outward current, transient 87
2-Oxoglutarate 18
Oxygen consumption hepatic 223

P

Pain 155
Pancreatic acinar cells 54
Paracellular conductance 336
Parvalbumin 280
Patch clamp 186, 302
Pentobarbital 243
Pentyl-TEA 35
Permeability, gap junctions 152
Photocurrent 238
– period 79
– receptors 238
– voltage 238
Physical exercise 63
Piezoelectric translator 83
Plasma membrane vesicles 173
Portal venous blood flow 223.
Portasystemic shunt 223
Post-synaptic responses 290
Potassium permeability 74
Pressoreceptor 102
Pressure-dependent renin release 102
Prolyl hydroxylase 271
Propylthiouracil 11
Protein synthesis 123
Proximal convolution of rat kidney 18
Pulmonary artery 46
– ventilation 309

R

Reactive hyperemia 285
Receptors 123
Relaxation 315
Renal blood flow 11, 102
– concentrating ability 208
– excretion of electrolytes 93
– failure 208
– reabsorption 18
– tubules 241
– tubular function 266
Renin release 102
Respiratory control 309
– rate 11
Resting metabolism 279
Retina 238
Rod 238
Rubidium transport 173

S

Sarcoplasmic reticulum 280
SCFA absorption 68
Short-chain fatty acid 68
Single channel recording 246
– gap technique 321
– Na channels 302
– renal tubules 241
Skeletal muscle 279
Skin blood flow 11
Skinned smooth muscle 315
Smooth muscle 290, 315
– – cells 46
– – contraction 203
Sodium and potassium permeability 74
– channels 302
– clearance 208
– transport 139
Solute transport 68
Spectral analysis of tremonrine 180
Spironolactone 93, 147, 213
Spontaneously hypertensive rats 74
Steal phenomenon 285
Stimulant-evoked current 54
Strontium 87
Suberyldicholine 246
Submandibular gland 255
Succinate 18
Sympathetic activation 63
– fibres 290
– neurones 194
Synaptic delay 161
– facilitation 1
– transmitter release 1

T

Taenia coli 315
Task performance 342
TEA 35
Temperature 161, 228
– effects 79
– regulation 11
Tension recovery 203
Termination of synaptic release 1
Tetanic force 275
Tetanus toxin 228
Theophylline 42
Thermal stimuli, C fibre activity 155
Thermogenisis 79
Thermoregulation 243
Thick ascending limb of Henle's loop 173
Threshold pressure 102
Thyroidadrenalectomy 255
Thyroid hormones 11
Thyrotropin-releasing hormone (TRH) 11
Tracheal smooth muscle 203
Transcellular Cl^- flux 259
Transepithelial potential difference 249
Transient outward current 87
Transmitter release 228
Tremorine and cold tremor 180
Trifluoperazine 152
Triiodothyronine 255
Tubular Na-K-ATPase 139
Twitch contraction time 275
– relaxation time 275
Tyrosine hydroxylase 79

U

Urea clearance 208
Uremia 208
Urinary Na/K ratio 93

V

Vascular resistance 119
Vastus lateralis muscle (rat) 216
Venous outlet resistance 129
Ventilation 309
Ventricular muscle 87
Ventrolateral medulla oblongata 119
Vibration 203
Visuomotor learning 342
Voltage-clamp 54, 157

W

Water absorption 68

X

Xenopus embryo cells 152
– laevis oocytes 157
